

E-commerce Sales Performance & Customer Behavior Analysis

Project Objective:

The primary objective of this project is to clean, transform, analyze, and visualize an E-commerce store dataset using Microsoft Excel. By performing descriptive, diagnostic, predictive, and prescriptive analytics, the project aims to identify top-performing product categories, analyze customer purchasing behavior, assess regional sales distributions, and build an interactive dashboard to drive data-informed business strategies.

Dataset Description:

The dataset contains transactional records from an online retail store, including details regarding customer demographics, order dates, product categories, quantities sold, unit prices, total revenue, and shipping details.

Column Description:

Column Name	Description
Customer ID	Unique identifier for each customer
Age	Age of the employee/customer
Gender	Gender of the customer
Order Date	Date on which the purchase was made
Product Category	Category of the purchased item (e.g., Electronics, Clothing)
Quantity	Number of units purchased in the transaction
Unit Price	Selling price per single unit
Total Amount	Total revenue generated from the order (Quantity $\times$ Unit_Price)
Region	Geographic region where the customer is located
Payment Method	Payment mode used (Credit Card, UPI, PayPal)

Data cleaning & transformation:

*using find & replace in country and cust-id and removing duplicated value.

Excel spreadsheet showing a dataset of customers. The columns are: Customer ID, Name, Age, Gender, City, State, Country, and Loyalty Level. The data is sorted by Customer ID. The spreadsheet includes a summary table on the right with formulas for cleaning and deduplication.

Customer ID	Name	Age	Gender	City	State	Country	Loyalty Level
CUST1000	Sheena Bonilla	55	Male	Donaldton	North Carolina	USA	unknown

Visualization and Insights Arrived with screenshot of visualization

Report/Dashboard screenshot:

- Descriptive analysis: what is the total sales by category?

Answer: Home-Decor – \$75,106.26

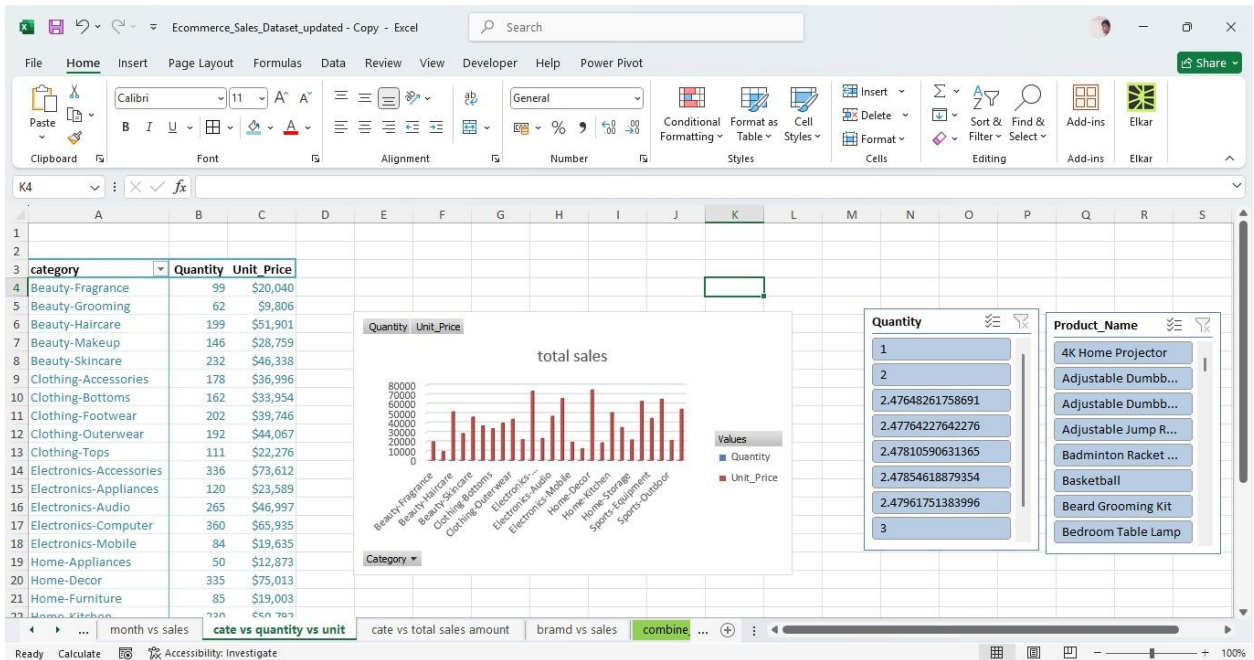

○

- Diagnostic Analysis:

Why does one category have higher sales than the other categories?

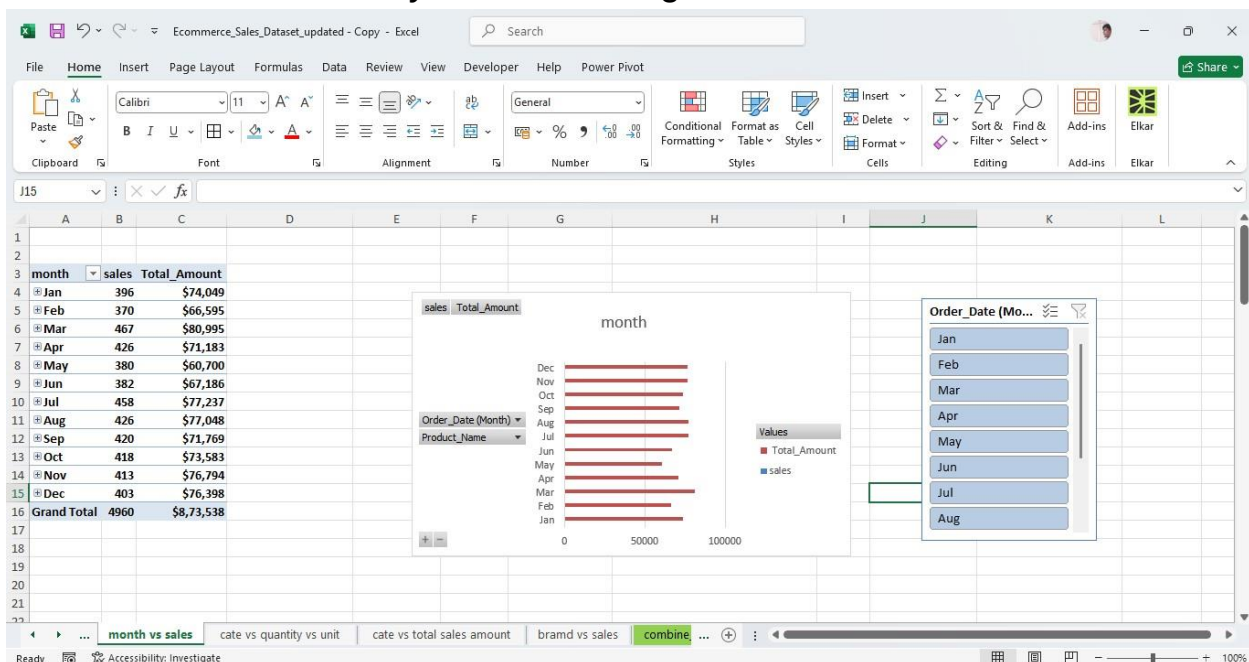

Answer: Home-Décor better for other products total home décor orders 139+ \$540.33 average order value.

- **Predictive Analysis:**

Based on previous monthly sales, what could be the sales trend for the next month?

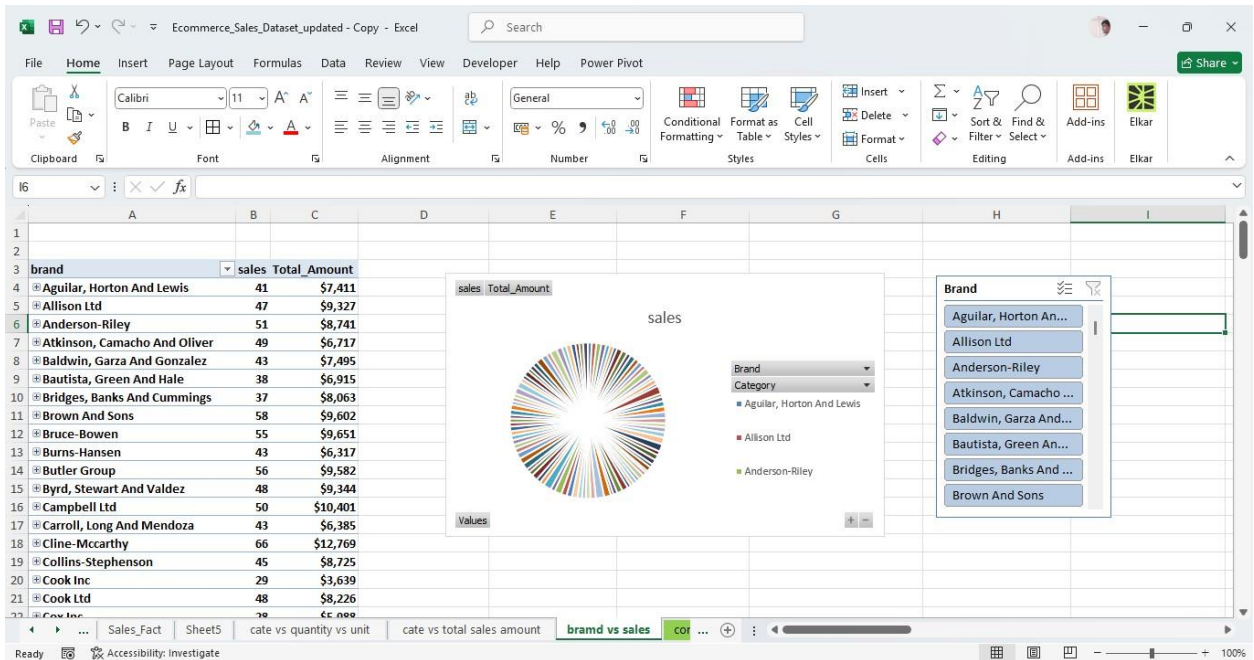

Answer: Sales may continue to high.

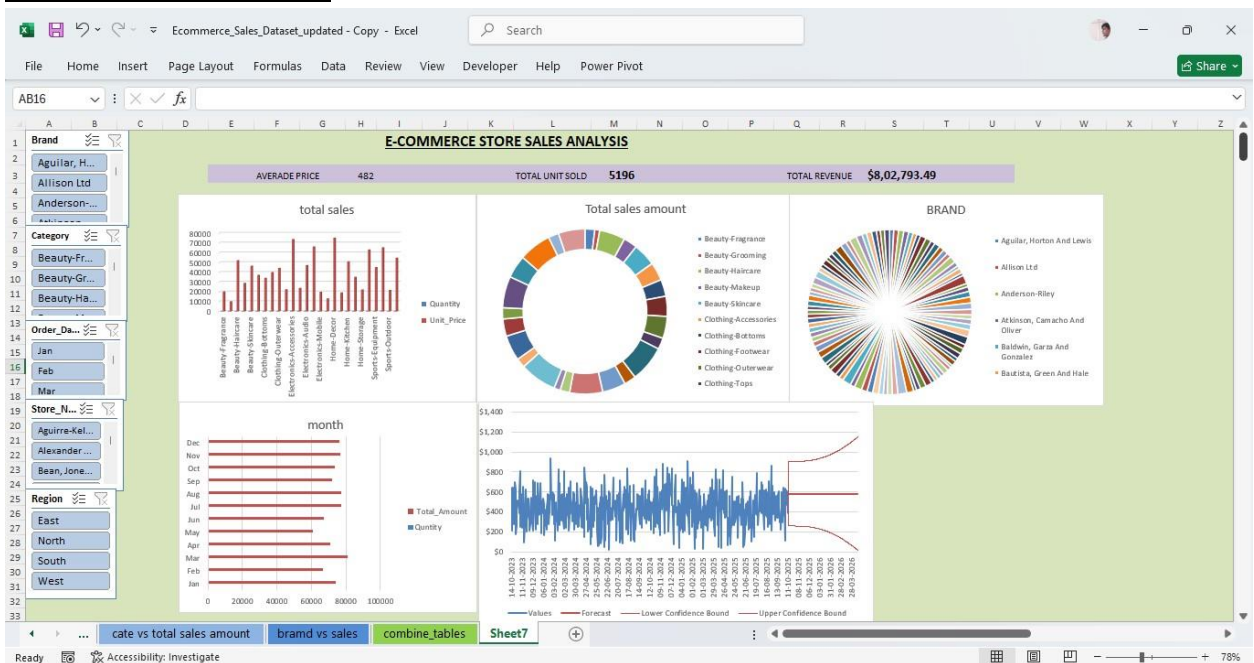

- **Prescriptive Analysis:**

Which category should the company promote more to increase sales?

Answer: Home-Décor promote more to increase sales.

Dashboard Image:

Final 4 type of insights as storytelling:

Descriptive Home-Decor has the highest sales at \$75,106.26.

Diagnostic Home-Decor leads because it has more orders and a high average order value.

Predictive Sales are expected to continue high future..

Prescriptive: company promote more sales Home-Decor to increase sales because home décor is high order.

Conclusion: Home-Decor is the best-performing category, with the highest sales.also high sales.so company focus home-decor .
